Waste Shipped: RQ, Hazardous Waste Solid N.O.S., Class 9, UN3077, PGIII, (K061)

(Emission Control Dust/Sludge from Primary Production of Steel in

Electric Furnaces) ERG #171

Quantity of Waste: 14,965,100 lbs.

Number of Shipments: 81

EPA # ARD053730701

Transporters: Fort Smith Railroad - US EPA ID Number - NED001792910

Union Pacific - US EPA ID Number - NED001792910

Waste Minimization: K061 is a byproduct from the melting and refining of steel scrap in Electric Arc Furnaces. The major component, which contributes to the toxicity of the waste, is lead. The typical lead content of K061 is approximately 5% compared to 1% for the K061 produced at our facility. The low lead content is due to the use of "clean" scrap in our operations. The volume of K061 produced per ton of steel produced, was reduced by approximately 10% in the early 1980's by changing the method by which lime is added to the furnaces. No other feasible technology is known which would further reduce either the toxicity or volume of K061 produced.

I certify under the penalty of law that I have personally examined and am familiar with the information submitted in this and all attached documents, and that based on my inquiry of those individuals immediately responsible for obtaining the information, I believe that the submitted information is true, accurate, and complete. I am aware that there are significant penalties for submitting false information including the possibility of fine and imprisonment.
